

How do you want to work in future?

 Swiss Quality

JORNS
power of flexibility

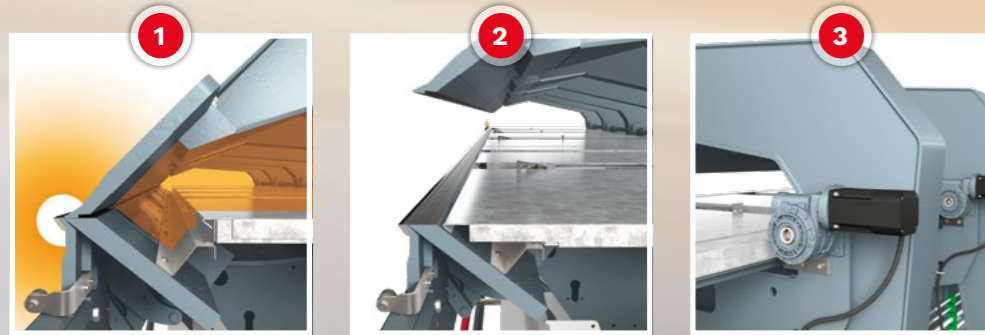

Online configurator:
 > www.jorns.swiss/jdb-en

Configure your own JDB:
 Bending length: 3.2 to 12.2 m
 Bending capacity: sheet metal up to 3 mm
 Options: control system, back stop system, shears and much more

Freer.

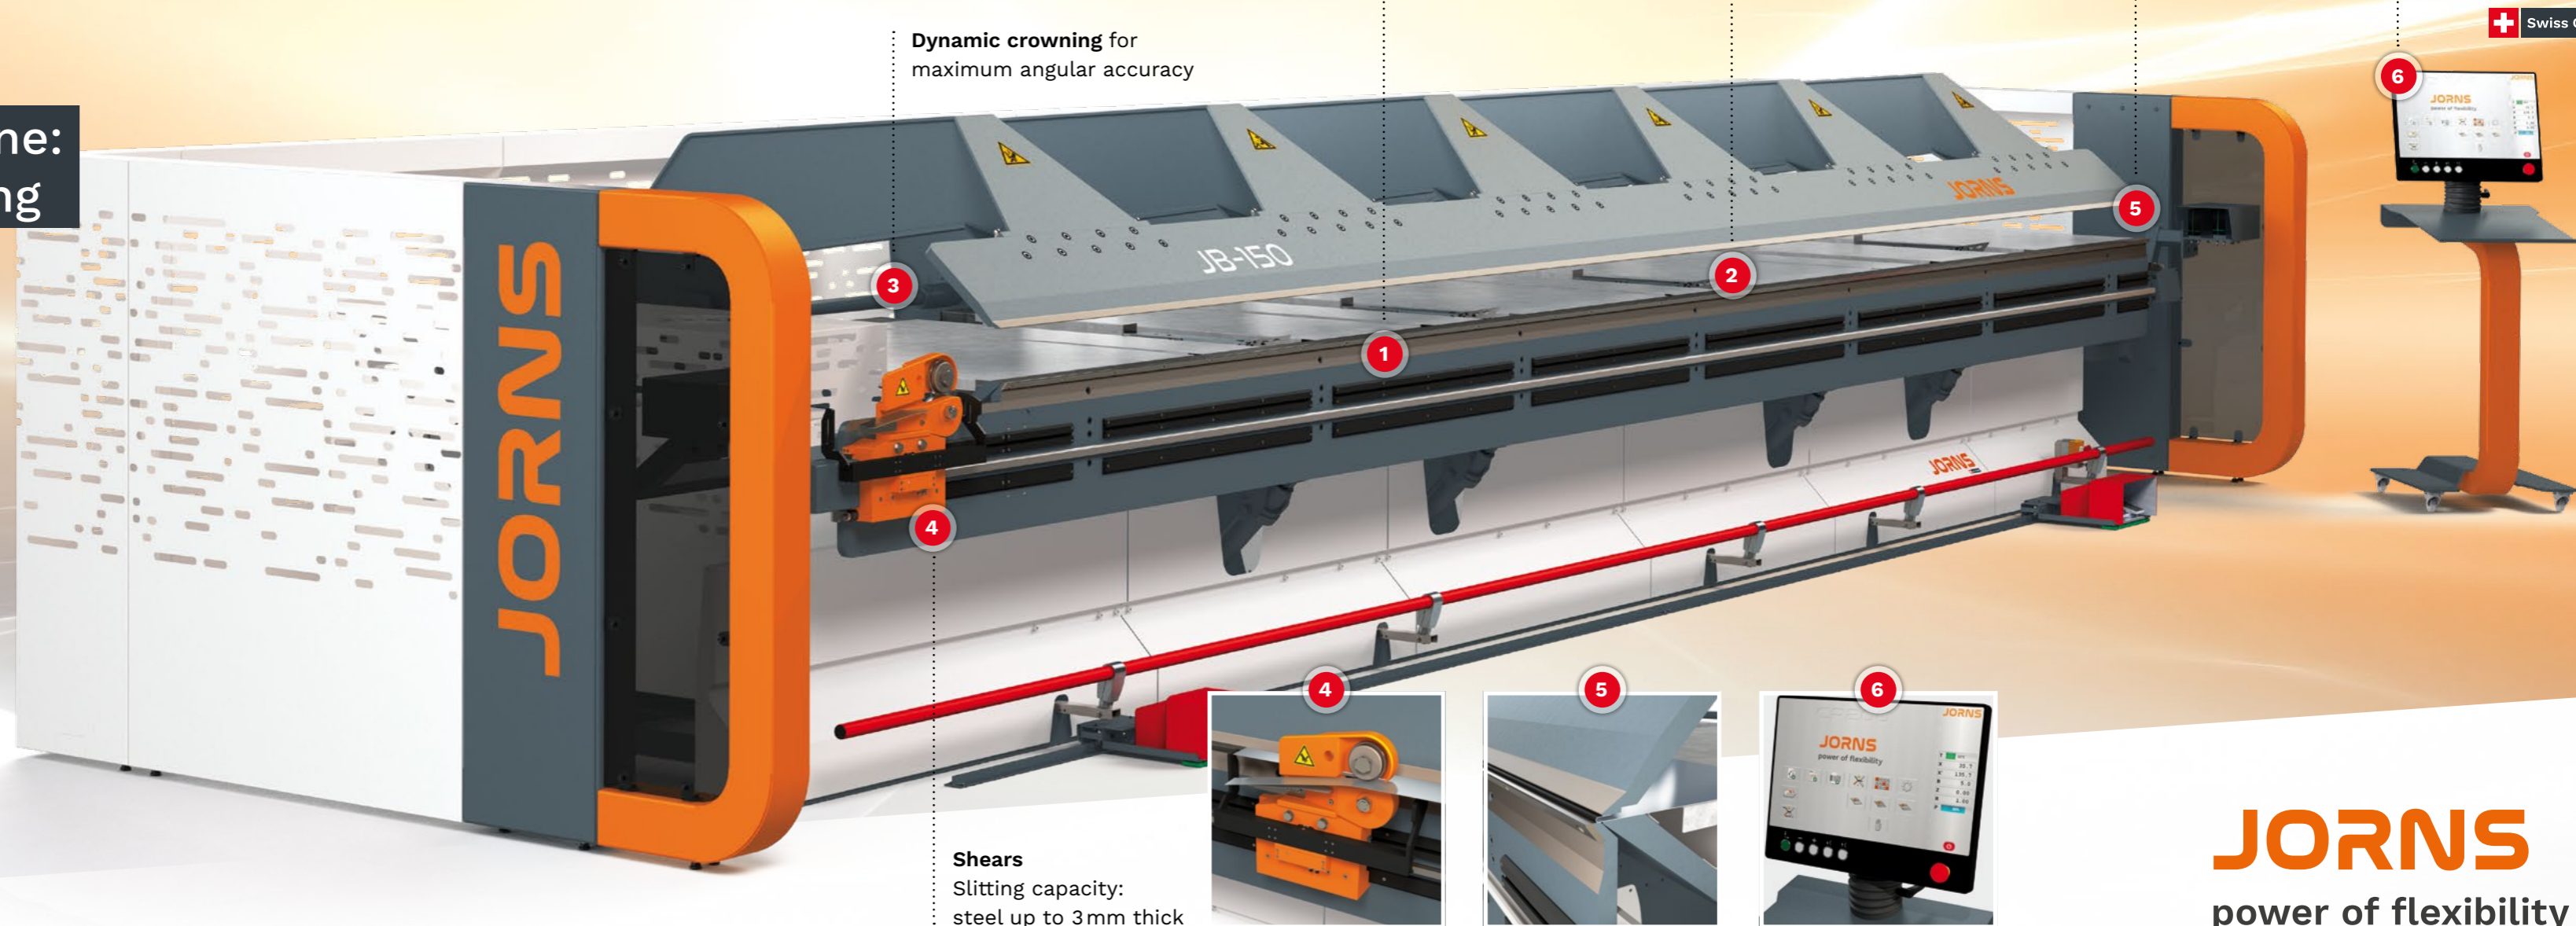

> With the Jorns JB bending machine:
 graphically controlled and inspiring

Benefit from the open space offered by the semi-automatic, graphically controlled Jorns JB bending machine. At the end of the day, you save time. Time you can use for greater freedom in your project. Any ideas?

The area behind the clamping tool offers above-average open space, letting you manufacture bending profiles extremely efficiently. The use of servo-technology and the back stop fingers that can be moved freely on

the sides guarantee maximum precision and flexibility to bend parallel, tapered or overlapped profiles. Complete with the latest control technology and intuitive graphic programming.

Bending tool with a "G" geometry offers extra open space

Precise stop points for parallel and tapered profiles

Individual closing dimension for each arm for precise open hems

Intuitive graphic control system for easy operation

Dynamic crowning for maximum angular accuracy

Swiss Quality

Shears
 Slitting capacity: steel up to 3 mm thick

Faster.

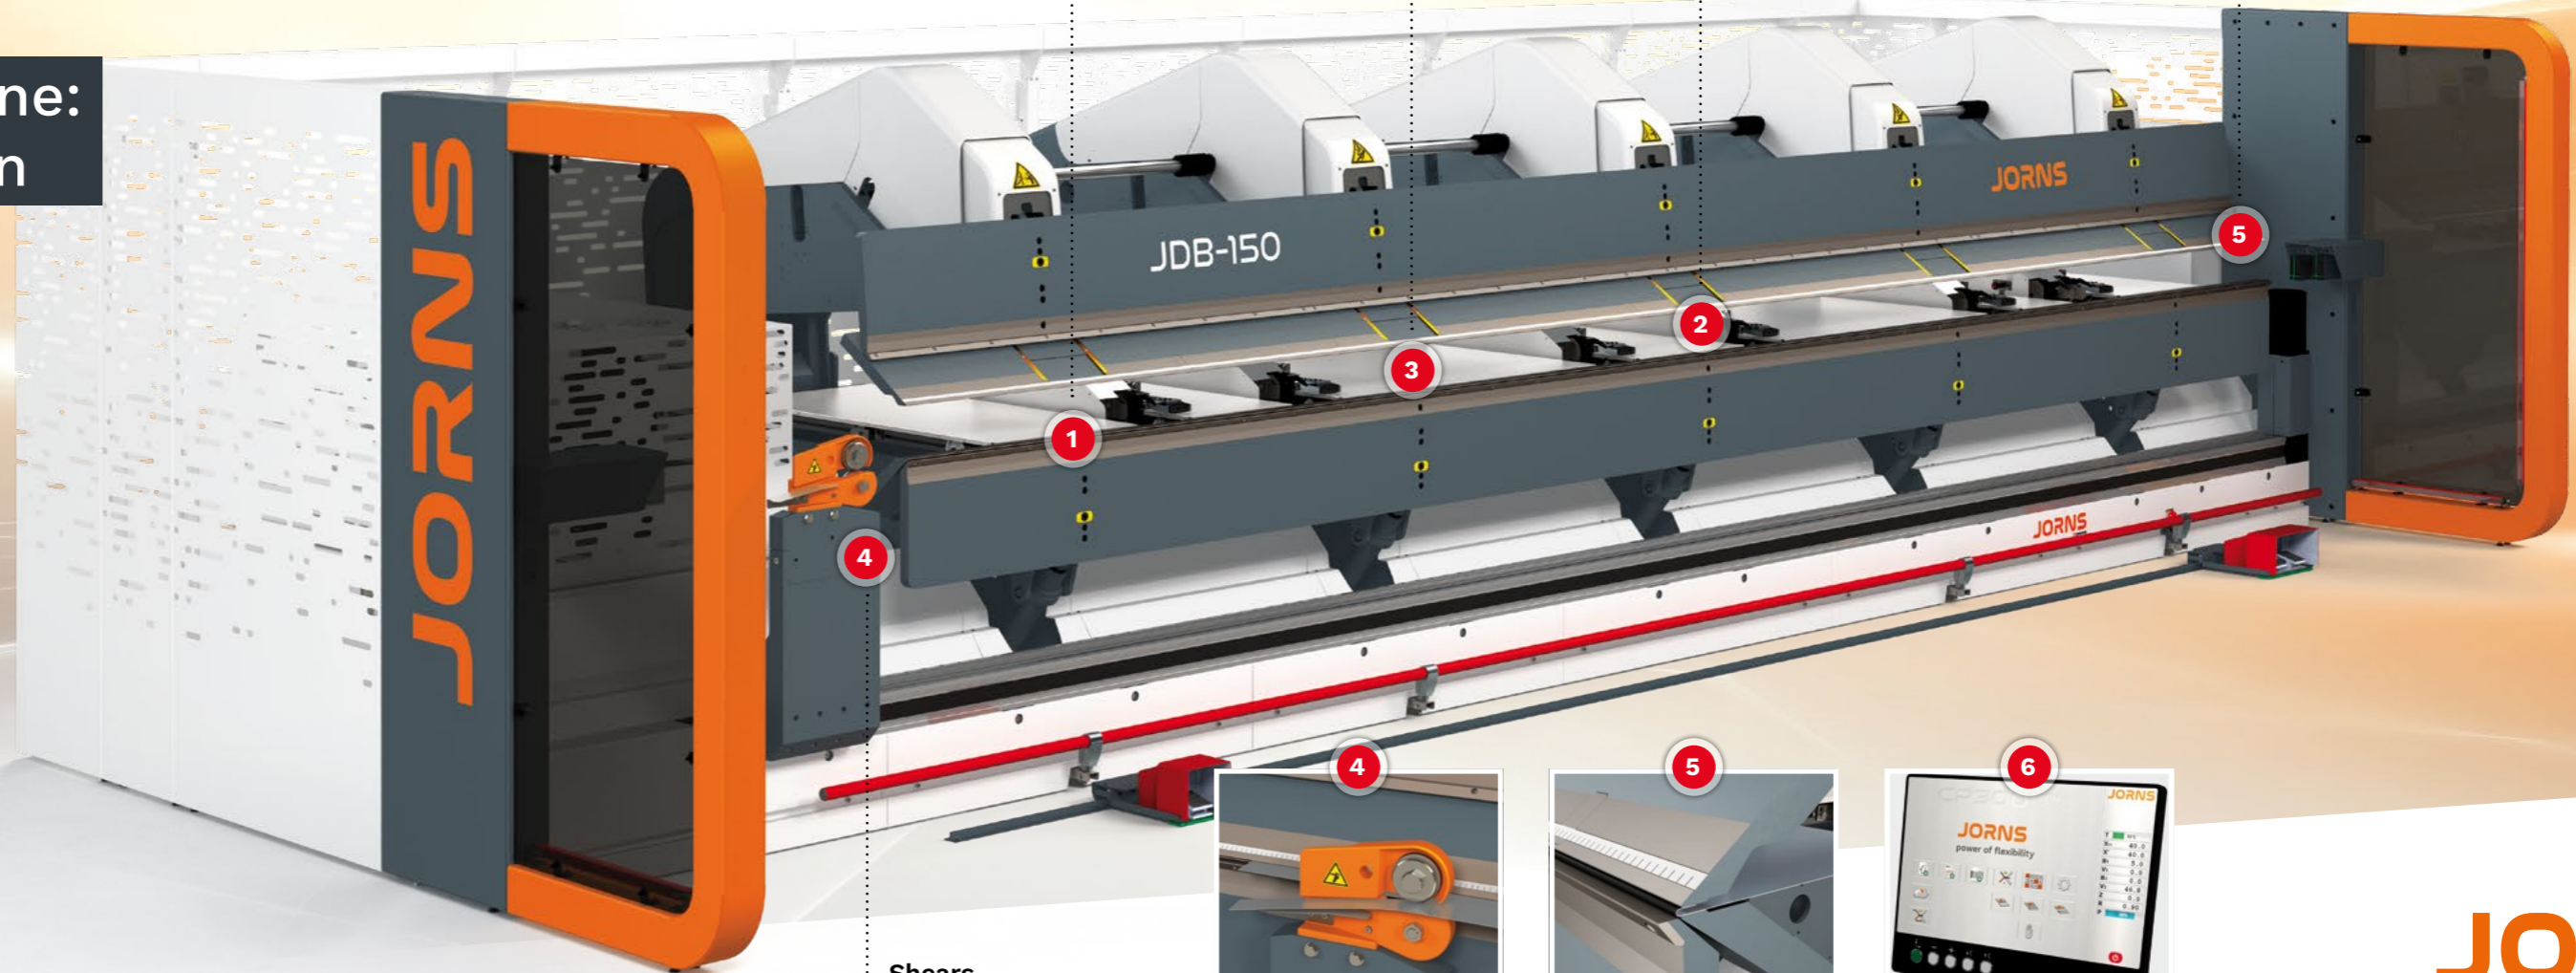

> With the Jorns JDB double bending machine: graphically controlled and adrenalin-driven

As several parallel, tapered or overlapped profiles can be bent simultaneously, the fully automatic, graphically controlled Jorns JDB double bending machine will speed your projects up. You are better equipped from the start and have the prospect of achieving even greater things. Heart skipped a beat?

The simultaneous bending of complex profiles poses no problem for the JDB because multitasking is a given on this machine. The area behind the clamping tool offers above-average open space: you can produce bending profiles without turning them around or over.

The use of servo-technology, the automatic loading and unloading table as well as the individually driven clamping fingers allow maximum precision and flexibility. Complete with the latest control technology and intuitive graphic programming.

JORNNS
 power of flexibility

More flexible.

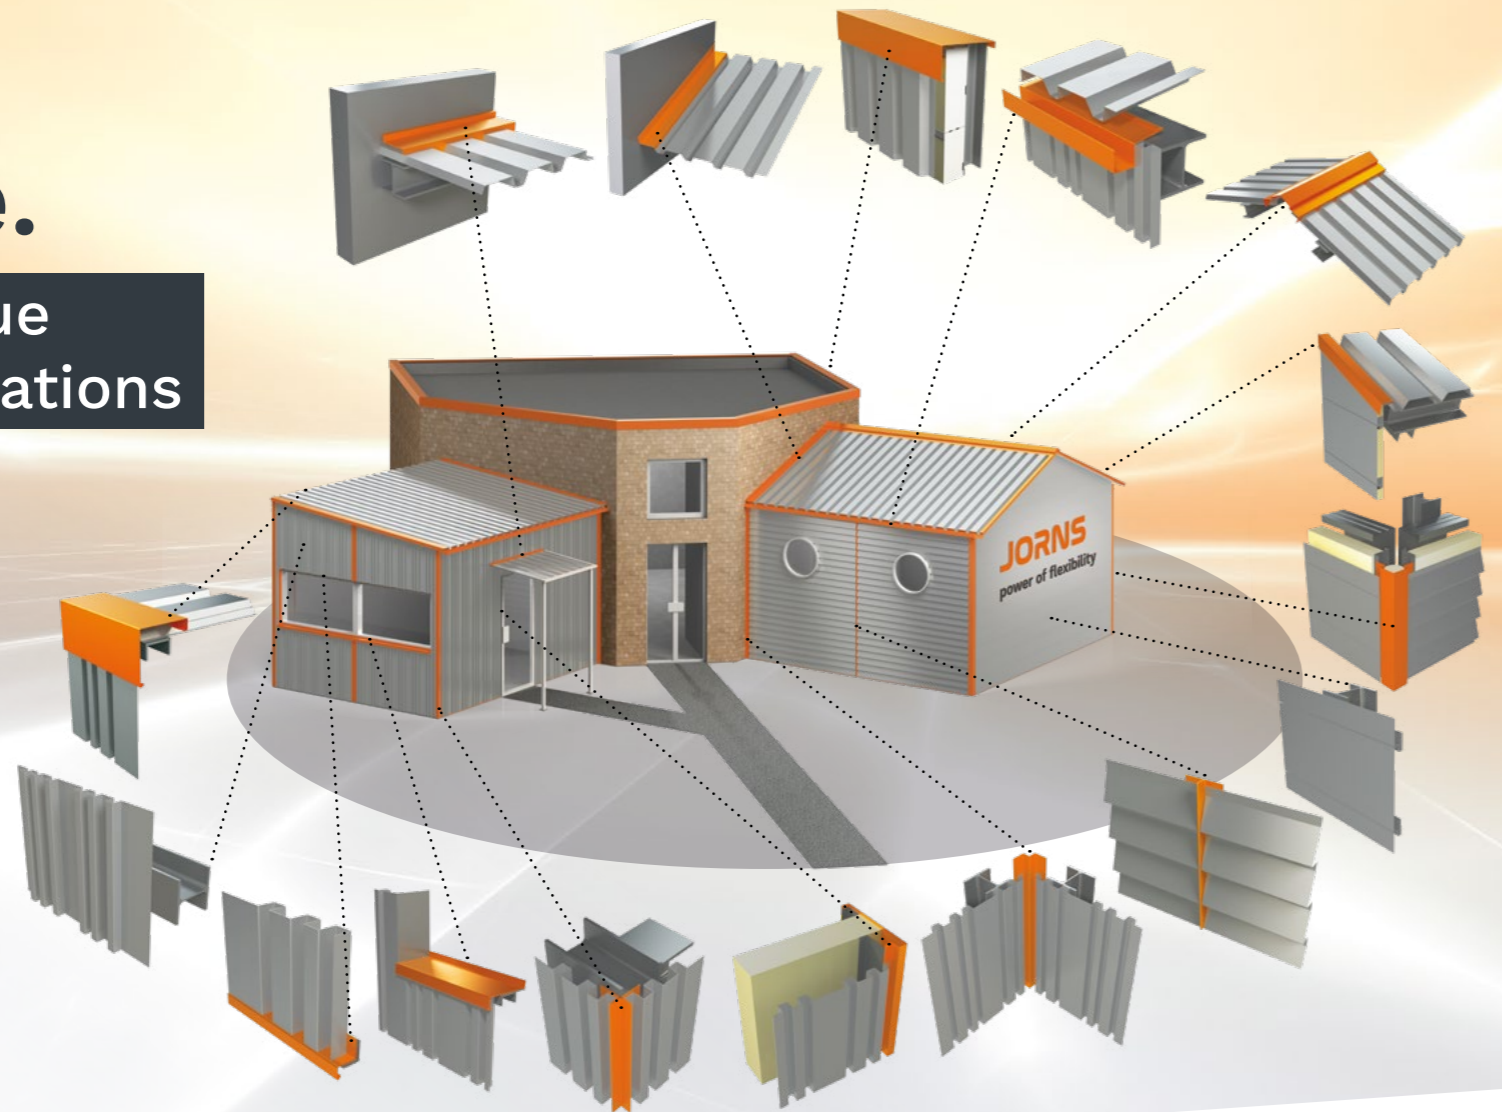

> Thanks to the unique Jorns profile applications

Up your profile.

You have to learn how to bend and cut properly yourself. But some special work can only be performed by our bending machines.

We will gladly check the feasibility of your profiles.

How we work:

- > Highly motivated
- > Exceptionally flexible
- > Innovative

We are Jorns AG.

Our specialities are bending and double bending machines as well as accessories for processing sheet metal. We have been developing and building these since 1973 – in Swiss quality.

Power of Flexibility.

We live our motto every single day. We always branch out onto new paths, thinking ahead, developing ourselves and our products to be able to cope with the future. At eye level and with an open ear for our customers and the market.

Form follows Function.

We are flexible, that's true. But there's one thing where we are unbending: functionality. We are only interested in the greatest precision and maximum efficiency here. Which is how our machines have become faster.

And the design?

The future belongs to the bold!

> Together we can create
a world of halls and roofs

Your vision ...

Are you a forward-looking and enthusiastic manufacturer of roof and wall profiles? We want to help you get ahead with your special requirements – and thus speed up your projects. To do so, we employ all of our expertise, great flexibility and passion as a Swiss manufacturer of sheet metalworking machines.

... made tangible:

With the online configurator. Define your very own Jorns JB bending machine or Jorns JDB double bending machine according to your needs and wishes.

You can find our configurator on our website. Or simply scan the QR codes in this brochure.

We are looking forward to hearing from you.
